

1. Escalation_log

Meterpreter session active

getuid

→ Server username: tomcat55

Attempted privilege escalation:

getsystem

→ Failed (not supported on Linux / insufficient privileges)

Conclusion:

Privilege escalation unsuccessful due to limited permissions.

2. Evidence_table

Passwd

4. Summary

Post-exploitation activities were performed after gaining access to the target system. The current user was identified as a low-privileged account. Privilege escalation was attempted but unsuccessful due to system restrictions. Sensitive file `/etc/passwd` was successfully retrieved and hashed to maintain integrity, demonstrating evidence collection and system access.
