

Title: Critical WordPress Exploit Chain

Findings:

- WordPress version 4.3.1 identified as outdated and insecure
- XML-RPC endpoint enabled
- Hidden administrative paths discovered during enumeration
- Multiple security misconfigurations identified through Nikto scanning
- Potential exposure to remote exploitation risks

Host:

192.168.31.48

Remediation:

- Update WordPress core and plugins regularly
- Disable unnecessary XML-RPC functionality
- Enable Web Application Firewall (WAF)
- Restrict administrative access
- Conduct regular vulnerability scanning and patch management
